### REMARKABLE POINTS ON THE MARKET

The market was in green on Monday, but the recover didn't see many positive signs. Number of gaining groups was major but trading value dropped to the lowest level of 2 months, showing investors' cautiousness. Blue-chips differentiated strongly, while the cash flow sought smaller-cap groups, especially aqua products, fertilizer, sugar, and logistics. At the same time, the codes related to public investment, infrastructure construction, and construction material were also excited.

### TECHNICAL POINT OF VIEW

In technical term, VN-Index gained again. The index stayed above MA20 that increased, and ADX stayed above 39, and +DI was above -DI, showing that the main trend in short-term is still recovering. However, the gain created Doji candle below MA5, and the volume stayed below 10 and 20-session average, showing that the cash flow tended to be cautious and hesitating. Not just that, MACD dropped further to below Signal, maintaining selling sign, showing that correcting pressure is still there and the risk of correcting to sentimental support level of 1,100 points is still possible. Therefore, investors should limit price-chasing purchase on surfing positions. For HNX, HNX-Index saw the 7<sup>th</sup> drop in a row. It closed below MA20, and MA5 cut down to below MA20, showing that correcting pressure is getting stronger and the index might drop further to support level of 220 points (MA20). In general, the market still hasn't shaken off all correcting pressure after the gain on July 03. Therefore, investors should limit price-chasing purchase on surfing positions, instead, using corrections to restructure the portfolio. In which, having priority on good-fundamental codes with positive business growth forecast in Q2/2023 that can attract the cash flow.
