### REMARKABLE POINTS ON THE MARKET

The market was quiet during derivative maturing session. After opening with a light dropping gap at the beginning, the market struggled within a small range after that with low cash flow. In the last few minutes, the recovery on some pillars helped main indexes going against the stream and closing in light green. However, there were not many groups that could gain consistently except for pork and Tra fish. The market was also balance between gainers and droppers. Remarkably, the liquidity created another sad record with the lowest level since the end of October 2023, showing investors' cautiousness.

### TECHNICAL POINT OF VIEW

In technical term, VN-Index saw the 3<sup>rd</sup> gain in a row. The volume stayed below 10 and 20-session average, showing that the cash flow is still cautious. Not just that, the index hasn't surpassed MA20 pressure, and Maa5 still differentiated negatively from MA20, showing that short-term dropping risk hasn't been shaken off and the gain might be a technical with close resistant around 1,107 points (MA20). Moreover, MACD dropped to below Signal, supporting selling sign, and ADX tended to 24 and -DI was above +DI, showing that the index might soon see pressure to correct again to support level around 1,073 points. For HNX, HNX-Index also saw a gain. The index surpassed MA20 but MACD was still below Signal, showing that selling pressure is still there and -DI was above +DI, showing that technical signs are different, and the gain is not too strong. Therefore, the index might still see risk of correcting again with close support around 223 points. In general, the market hasn't shaken off short-term correcting pressure after the gain on December 21. Therefore, investors should consider cautiously with high-price purchase to limit unexpected risk from general market.
